CLOUD COMPUTING SOLUTIONS

ABOUT API SYSTEMS

API Systems is a comprehensive IT services and solutions provider, that specializes in helping businesses recognize the power of technology, and how it can help meet its growing demands. In today's IT landscape, its all about how to achieve better performance, speed, efficiency, all while being as cost effective as possible. API Systems can bring these benefits to your IT environment, and your business, with a cloud technology strategy, tailored to your specific needs.

API SYSTEMS GETS YOU ABOVE THE CLOUD

A STREAMLINED AND SEAMLESS TRANSITION FOR YOUR BUSINESS

The cloud is growing as the goal state for enterprise IT infrastructure strategy, but getting there isn't easy. It requires planning and a thorough understanding of your specific business needs. A cloud service provider, will provide you with the cloud platform you need, but mainly from an infrastructure standpoint. Implementing a cloud solution in a way which aligns with your business, is where API Systems really shines. With our wide array of cloud expertise and practical business experience, API Systems can be everything from your cloud architect, to your implementation partner and managed services provider. Let the experts at API Systems show you how we can assist.

BETTER. FASTER. CHEAPER.
Lower technical debt.

Reduce spending on technology infrastructure.
Maintain easy access to your environment, with a simple, pay as your grow, pricing model

Improve accessibility.
You have access anytime, anywhere, making your life so much easier!

Increase productivity.
People worldwide can access the cloud, provided they have an Internet connection.

Improve reliability
Remove the reliance on physical infrastructure, and increase reliability of your data and application environment on the cloud

Flexibility & Scalability
The second a company needs more bandwidth than usual, a cloud-based service can instantly meet the demand because of the vast capacity of the service's remote servers.

Disaster recovery
When companies start relying on cloud-based services, they no longer need complex disaster recovery plans. Cloud computing providers take care of most issues, and they do it faster.

Low Maintenance
Cloud computing suppliers do the maintenance – including security updates –themselves, freeing up their customers' time and resources for other tasks.

Energy Savings
Businesses using cloud computing only use the server space they need, which decreases their overall energy footprint (electric, cooling, space).

Increased collaboration
Cloud computing increases collaboration by allowing all employees – wherever they are – to sync up and work on documents and shared apps simultaneously, and follow colleagues and records to receive critical updates in real time. A survey by Frost & Sullivan found that companies which invested in collaboration technology had a 400% return on investment.

Cost Effective
Cloud computing services are typically pay as you go, so there's no need for capital expenditure at all. And because cloud computing is much faster to deploy, businesses have minimal project start-up costs and predictable ongoing operating expenses.
